

Center for Autism and Related Disorders Partners with Chuck E. Cheese's Attleboro for Sensory Sensitive Sundays

The joint event will provide a fun experience for individuals with autism spectrum disorder.

ATTLEBORO, MA (November 3, 2016) – Center for Autism and Related Disorders (CARD) today announced Sensory Sensitive Sundays, a collaboration with the Chuck E. Cheese's location in Attleboro, MA, to provide children with autism spectrum disorder (ASD) the opportunity to experience the fun of a visit to Chuck E. Cheese's in a sensory-friendly environment. Parents of children with ASD are encouraged to bring their families to experience a unique day, scheduled for the first Sunday of each month, filled with fun for all.

"We are so happy to be partnering with CARD," said Breanna Tanksley, manager of Chuck E. Cheese's Attleboro. "We are excited to provide a special opportunity every month for sensory sensitive families to enjoy their favorite pizza and games in a safe and friendly environment of tolerance and understanding."

Sensory Sensitive Sundays provides another recurring opportunity for the ASD community to engage with local businesses and allow kids to have a good time in a safe environment. Previously, CARD Providence teamed with Launch RI for a similarly themed monthly event called VIP Time.

"CARD Providence is so happy to partner with Chuck E Cheese's in Attleboro to bring another monthly, sensory-friendly event to the families in our community," said Amanda Moniz, outreach coordinator for CARD Providence. "Families can enjoy Chuck E. Cheese's in a comfortable, sensory-friendly setting before it opens to the general public."

The planned monthly event will kick off on November 6 from 9:00-11:00am at 247 Washington Street, S. Attleboro, MA 02703. For more information, please call (508) 399-8445.

About Center for Autism and Related Disorders (CARD)

CARD treats individuals of all ages who are diagnosed with autism spectrum disorder (ASD) at treatment centers around the globe. CARD was founded in 1990 by leading autism expert and clinical psychologist Doreen Granpeesheh, PhD, BCBA-D. CARD treats individuals with ASD using the principles of applied behavior analysis (ABA), which is empirically proven to be the most effective method for treating individuals with ASD and recommended by the American Academy of Pediatrics and the US Surgeon General. CARD employs a dedicated team of nearly 2,000 individuals across the nation and internationally. For more information, visit www.centerforautism.com or call (855) 345-2273.
